

How to set Privacy Mask?

Answer:

On certain occasions, you may need to set a mask area on the camera image to protect privacy, for example, the keyboard of an ATM machine. When PTZ changes its position or zooms, the Privacy Mask will be adjusted accordingly to protect the area all along.

Note: This function may vary with models. Please see actual Web interface for details.

Note: Some models support up to 24 privacy masks. The same picture shows up to only 8 privacy masks.

1. Click **Setup > Image > Privacy Mask**.

No.	Name	Max. Zoom	Operation
1	Mask1	1.00	

2. Click **+** to add a privacy mask, and click **🗑️** to delete a mask.
 - To mask a position: Click the box (with **Mask** displayed on it) to activate the mask. After the cursor shape has changed, drag the box to the intended position.
 - To mask an area: Use the mouse to draw a box on the area you want to mask.

When privacy mask is configured, the intended area is blocked. The following shows an example.

3. Set mask mode. You may select regular or irregular mode as needed. In irregular mode, when the PTZ camera rotates, the privacy mask varies with the shape of the masked object in the image.

Note: Only some certain models support mask mode. Please see the actual model for details.
